- For use on asphalt or concrete
- Patented technology

Patents # 8,534,954 & 8,858,115, CA2887861

Pothole repair
Crack & joint sealing
Seal utility cuts
Manhole & utility surround

Hide/cover unused road markers
Seal distressed pavement
Protect speed bump edges
Fix uneven bridge joints

INSTRUCTIONS | Repair site must be clean and dry for patch to adhere properly

1. Remove loose material from repair site. Fill and seal intersection cracks around repair. Fill area with hot or cold asphalt fill mix.

4. Cut patch to extend beyond repair area by 4" on all sides. If 2 or more pieces are required to cover the area, a minimum of 3" overlap must be used.
Note: it is easier to cut the patch from the back/film side

2. Compact fill mix. The material should be compacted so that the surface of the fill is level or slightly above the surface of the roadway.

5. Peel the release film from back of patch and apply to prepared pavement area. Tamp or roll in with vehicle tire to bond patch to clean, dry pavement. Patch should be exposed to traffic immediately.

3. Clean area of dust, debris, salts or oils. Area must be completely dry. If ambient temp is below 75°F, either apply propane torch to surface where the patch will be placed and heat the surface, or apply approved primer. *This is critical in assuring the American Road Patch™ will adhere to the existing road surface.*

⚠ WARNING: This product can expose you to bitumens which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov
